The Art of Critical Thinking

BY GIDEON

Our society is in the grip of an epidemic of deception. A masterful thief has cast a bewitchment upon the masses so that, facing very little resistance, he can plunder them. Complex machinery is used to feed us with carefully crafted narratives. It utilises the internet, AI, arts and entertainment, media, literature, music and education to indoctrinate unthinking people with Marxist ideology and dystopian ideas.

Those caught thinking for themselves and, much worse, voicing their opinions, quickly find themselves labelled. For example, even if you have witnessed first hand people getting

injured by a vaccine and then question the government's claim that it is safe, you are still an 'anti-vaxxer'.

This labelling phenomenon is far from accidental. The terms used are sown into society by politicians, media personalities and other cultural influencers who know that the masses will pick up and amplify their message. Therefore, most free thinking people don't speak up for fear of marginalisation or abuse; and this only strengthens the deceptions, as the lies go somewhat unchallenged.

Just one example of this device of deception in action would be the COVID-19 vaccine...

What were we told (repeatedly)?

COVID-19 vaccinations are safe and effective; getting the 'jab' is the right thing to do.

QUOTE OF THE WEEK

"Discernment is not knowing the difference between right and wrong. It is knowing the difference between right and almost right."

CHARLES SPURGEON

What happened to the many medical professionals, researchers, scientists and ethicists who challenged this view?

They were verbally abused, mistreated, de-platformed, some lost their jobs, all were accused of being anti-vax / conspiracy theorists / spreaders of misinformation.¹

What is the reality on effectiveness?

“The current vaccines are not infection-blocking... when new variants come up you lose protection... they have a very short duration” - Bill Gates, 23rd January 2023.²

What is the reality on safety?

Germany's Federal Minister of Health Karl Lauterbach, in the face of overwhelming evidence that could no longer be suppressed, was forced to admit that vaccine 'adverse events' are common and that those suffering from severe vaccine injuries are being ignored. Lauterbach, one of Germany's foremost voices in favour of vaccine mandates, made the comments in a March 12th 2023 interview on ZDF.³ As recently as February 2022, Lauterbach claimed COVID-19 vaccines are free of side effects. Those who did their research and thought for themselves understood, even before the clinical trials had completed,

In short words: they don't work. And this is from the same man who made a fortune investing in the COVID-19 vaccine and who, last year, was pushing hard for mandatory vaccination of all age groups. The COVID-19 'jab' is so ineffective that government agencies had to redefine the word 'vaccine', in order to be able to refer to it as a vaccine (because by the former definition, a vaccination provides immunity and limits the transmission of a disease - two things this jab does not do.)

that this new vaccine could not possibly yield the results that politicians and other leaders continually promised. The evidence against its effectiveness was overwhelming from the start.

How is that people swallowed the lies? For many, they simply believed what they wanted to believe. It was an emotional decision.

“You will know the truth, and the truth will set you free.” Jesus said that to his disciples, in reference to his teachings. But the principle is generally applicable: the truth sets you free, when you walk in the light of it. Wouldn't you like to be free? It starts with critical thinking!

to be continued....

“The simple believes everything, but the prudent gives thought to his steps.”

PROVERBS 14:15

FACT OF THE WEEK

According to a survey by the Times Education Supplement, 85% of teachers worldwide feel their students don't have the critical thinking skills they need when they start university.
